Explain the tuning process of a drum.

Ensure the drum is producing a uniform note by adjusting the tuning rods evenly. This is accomplished by tapping close to (approximately 25 millimetres) a tuning rod and then tapping the same distance in from the rod that is diametrically opposite, adjusting this second rod until the note produced is of identical pitch to the first. continue in this manner around the drum, always referring to (tapping) the original note until this note is produced at all tuning points.

Examiner's signature (live exams)

Each candidate will be required to present their individual copy of the book In live exams the examiner will sign the book. If necessary the book may be re-used for examination retakes by the same candidate. The book to be signed each time.

Photocopies, PDF's etc, of this book are not allowed.
